

Identifying Form and r-Values

Can you identify the Form, Direction, and Strength of these displays? If the form is linear, approximate the r -value to express Direction and Strength. **TEACHERS:** We have run linear regressions on these scatter plots to help you (the educators) to visualize the correlations better. Students have NOT YET been introduced to Ir-plots.

<p>A</p>  <p>Form : Linear r close to : -0.6</p>	<p>B</p>  <p>Form : Linear r close to : -1</p>
<p>C</p>  <p>Form : No Correlation r close to : 0</p>	<p>D</p>  <p>Form : Linear r close to : 0.4</p>
<p>E</p>  <p>Form : Linear r close to : 0.7</p>	<p>F</p>  <p>Form : Non-linear r close to : Non-linear so no</p>
