

Reading Contracts

Consider the following contract:

```
text :: (str :: String, size :: Number, color :: String) -> Image
```

What is the **Name** of this function? text

How many things are in this function's **Domain**? 3

What is the **type** of this function's **first argument**? String

What is the **name** of this function's **second argument**? size

What is the **Range** of this function? Image.

Below, circle which expression is the correct application of this function, based on its contract.

1. `text("Bootstrap:Data Science", "purple", 60)`
2. `text(circle(99, "solid", "green"))`
3. `text("red", 25, "Andrew")`
4. `text("Angela", 25, "purple")`
