Applying Functions

Type this line of code into the interactions area and hit "Enter": triangle(50, "solid", "red")

1	What is the name of this function?	triangle
2	What did the expression evaluate to?	(sample answer) a solid, red triangle
3	How many arguments does triangle expect?	3
4	What does the triangle function produce? (Numbers? Strings? Booleans?)	(sample answer) a picture? an image?

Catching Bugs

The following lines of code are all BUGGY! Can you spot the mistake? *Match* the code (left) with the mistake (right). If you have time, type in the buggy code and see what Pyret does!

triangle(20, "solid" "red")	1 (C)	Α	Not enough arguments for triangle's Domain
triangle(20, "solid")	2 (A)	В	Missing open parentheses
triangle(20, 10, "solid", "red")	3 (D)	С	Missing a comma between arguments
triangle (20, "solid", "red")	4 (E)	D	Too many arguments for triangle's Domain
triangle 20, "solid", "red")	5 (B)	Е	Space after the function name
