Contracts

num-min, it takes two inputs (both Numbers), and it evaluates to a Number. From the contract, we know num-min (4, 6) will evaluate to a Number. Use the Contracts tell us how to use a function. For example: num-min :: (a :: Number, b :: Number) -> Number tells us that the name of the function is blank line under each contract for notes or sample code for that function!

Name		Domain		Range
string-repeat	::	<pre>(text :: String, repeat :: Number)</pre>	^ 	String
string-contains	::	<pre>(text :: String, search-for :: String)</pre>	^ I	Boolean
num-sqr	::	(n :: Number)	^ 	Number
num-sqrt	::	(n :: Number)	^ 	Number
num-min	::	(a :: Number, b:: Number)	^ 1	Number
num-max	::	(a :: Number, b:: Number)	^	Number
count	::	(t :: Table, col :: String)	^	Table
mean	::	(t :: Table, col :: String)	^	Number
median	::	(t :: Table, col :: String)	^	Number
modes	::	(t :: Table, col :: String)	^	List <number></number>
bar-chart	::	(t :: Table, col :: String)	^ 1	Image
pie-chart	::	(t :: Table, col :: String)	^ 1	Image
histogram	::	(t :: Table, values :: String, bin-width :: Number)	^ 1	Image
