## **Making Histograms**

Suppose we have a data set for a group of 50 adults, showing the number of teeth each person has:

| Number of teeth | Count |
|-----------------|-------|
| 0               | 5     |
| 22              | 1     |
| 26              | 1     |
| 27              | 1     |
| 28              | 4     |
| 29              | 3     |
| 30              | 5     |
| 31              | 3     |
| 32              | 27    |

Draw a histogram for the table in the space below. For each row, find which interval (or "bin") on the x-axis represents the right number of teeth. Then fill in the box so that the height of the box is equal to the *sum of the counts* that fit into that interval. One of the intervals has been completed for you.
