Grouped Samples from the Animals Dataset

Use method chaining to define the **grouped samples** below, using the helper functions that you've already defined: `is-old`, `is-young`, `is-cat`, `is-dog`, `is-female`, `lookup-fixed`, and `has-s-name`. We've given you the solution for the first sample, to get you started.

Subset	The code to define that subset
Kittens	`kittens = animals-table.filter(is-cat).filter(is-young)`
Puppies	`young-dogs = animals-table.filter(is-young).filter(is-dog)`
Fixed Cats	`fixed-cats = animals-table.filter(is-fixed).filter(is-cat)`
Cats with "s" in their name	`s-cats = animals-table.filter(is-cat).filter(has-s-name)`
Old Dogs	`old = animals-table.filter(is-dog).filter(is-old)`
Fixed Animals	`fixed = animals-table.filter(is-fixed)`
Old Female Cats	`old-f-cats = animals-table.filter(is-old).filter(is-female).filter(is-cat)`
Fixed Kittens	`young-fixed-cats = fixed-cats.filter(is-young)`
Fixed Female Dogs	`fixed-female-dogs = fixed.filter(is-female).filter(is-dog)`
Old Fixed Female Cats	`old-fixed-f-cats = old-f-cats.filter(is-fixed).filter(is-female).filter(is-cat)`
